

Landmark Trust - Historic Buildings

Renovation & Refurbishment

Warden Abbey

Keepers Cottage

The Landmark Trust is a Charity that rescues important buildings that would otherwise be lost and carefully and sensitively restore them. By making them available for holidays, they make sure they can be enjoyed by all, both today and for future generations. They have in their care nearly 200 buildings in Britain and several in Italy and France.

They needed a local Electrical Contractor that could be sensitive to the heritage sites and provide modern systems without ruining the character of the buildings.

Wadys were pleased to have been chosen and have worked with the Landmark Trust for the last 10 years.

Please see page 2 for the list of services we provided.

Queen Anne's Summer house

Cavendish Hall

Wadys delivered a variety of services in each of the buildings, some are listed below:

- Distribution systems, sub-main and small power
- Containment for all services
- New and renovated light fittings
- Hardwired and wireless fire alarm systems
- Intruder alarm systems

The primary strategy was to preserve as many surviving features as possible. Therefore all parts of the electrical installation had to be approached in a selective and sensitive method. This enabled the building to remain the way it was intended to be when it was first built, now including the necessities of the modern world.
