

Ilmor Engineering - LED Lighting

The solution proposed projected a running cost saving in the region of £10K for the year.

We were asked by the customer Ilmor Engineering to carry out a lighting survey of the existing installation to both the 'machine shop' and 'engine build' areas.

Considerations were made to the environment and suitability of an alternative LED type solution, offering a maintenance free installation.

Our proposed solution took on board the sensitive nature of the install and the restricted access problems.

Taking into account the installation cost, the projected payback is 2.6 years.

!! Wadys Electrical were recommended to Ilmor by word of mouth. They put in a tender for changing the lighting to our machine shop to LED battens. The tender was thorough, competitive and showed Ilmor the savings benefit and ROI timescales for changing to LED lighting. Wadys undertook this initial work, we were encouraged by their professionalism, the attitude of their staff to our flexible requests and how they left the site clean and tidy. Subsequently, based on the initial good first impression, we have upgraded the rest of our workshops and offices by Wadys. I would happily recommend them as a supplier that does a thorough job and goes out of their way to ensure customer satisfaction. !!

The Welding Institute

New Build Testing Facility

Wadys have been pleased to work with SDC Special Projects on a Testing Facility Building.

Wadys provided electrical services to two new buildings, the pressure test building and the high bay building. The pressure test building being a full IP rated installation.

Our works included the following services:

- Internal, Emergency & External Lighting
- Small Power Installation (mc 110v distribution)
- CCTV
- Intruder Alarm
- Fire Alarm
- Lightning Protection
- Mechanical Controls Wiring
- Crane Supply

Leeds Super Centre

Design And Build

Belron® UK Ltd trading as Autoglass® and Laddaw® asked us to provide the electrical services for their new “Super Centre” in Leeds which combines the Laddaw Vehicle Glass Distribution operation with the Autoglass Vehicle Glass Fixing Operation. We have a long standing relationship with Belron having dealt with the refurbishment of a number of their depots so we were very pleased to work on another project with them.

The project in Leeds was design and build. Wadys delivered the following services:

- Distribution systems and sub-mains.
- General power.
- Energy efficient lighting internally and externally.
- Lighting control systems.
- Fire Alarm system.

The brief from Belron was to service all their working requirements whilst providing a high degree of energy efficiency along with a pleasing modern look.

Wadys delivered the project on time and on budget.
